

TRAP ASSEMBLY GUIDE

'2000' Trap

There are 3 components to the '2000' Trap:

1. The re-usable trap
2. The replaceable sticky insert
3. The replaceable GP2 lure

Step 1. (Folding the trap)

With the printed panel of the trap facing downwards, bend flap 'A' upwards and fold the corner tips inwards. Fold along the other crease marks and close the trap with tab 'B' in slot 'C' (making sure that flap 'A' is inside the trap).

Step 2. (Folding the insert)

With the glue side upwards, bend up flap 'E' and fold the corner tips inwards. Remove the protective paper and place a lure on the centre of the glued surface. Holding it by the finger tab, slide the insert into the trap.

Step 3.

After sliding the baited insert into the trap, bend the 2 canopy flaps 'D' downwards to limit the gap of the entry slots to 5mm.

The trap is now ready for placement.

Tips:

- When you have finished monitoring, keep the trap and dispose of the insert. (You can use the trap many times with new inserts and lures.)
- You don't have to open the trap to remove or replace an insert. They will slide easily into the trap when you apply light pressure on the end flap with your thumb.
