

TRAP ASSEMBLY GUIDE

Diamond Trap

The '**Diamond**' Trap is a single piece construction trap that can be assembled very simply and quickly by pulling the trap open and tucking in the end flaps.

Step 1. (Opening the trap)

Grip the trap firmly with one hand over the hole that is punched out on the top strip, and the other hand gripping the centre of the 'keel' on the bottom of the trap. Pull the trap apart so that the glued surfaces come free and the trap assumes a 'diamond' shape.

Step 2. (Fixing the shape)

At each end of the bottom keel, you will see a scored fold marking. Push each end of the keel upwards to make a 'tray' shape on the bottom of the trap. This will make the trap rigid and give it the correct shape.

Step 3. (Baiting the trap)

Open the packet containing the pheromone lure and place the lure horizontally in the centre of the sticky base of the trap. Hang the trap in the desired location using the provided twist-tie.

Tips:

- Do not store the traps in a hot location, since this will cause the glue to 'creep'
- Make sure that the ends of the trap are properly pushed upwards to allow the trap to keep a rigid, open shape.
- If the traps are located in very dusty locations, check frequently to make sure that the glued surface is still sticky.
- Traps may be disposed of in the household garbage when full or no longer required. Lures should be replaced with new ones after approximately 6 weeks – depending on the type of lure.
